Magnetism

What do you know about magnetism? Magnetism is a type of force that act on some objects. Therefore, some objects are magnetic and some are not.

You will need:

- A magnet
- 10 everyday objects such as nail, paper clip, rubber, paper, stick etc.

Steps:

- 1) Predict which objects will be attracted to the magnet.
- 2) Use the magnet to see whether each object is attracted to the magnet (Magnetic).
- 3) Create a table showing your results of magnetic and non-magnetic objects.
- 4) Bring your findings to class to share.
